surefire. CAPITAL

SPOT · HYPERLIQUID · YOUR WALLET STAYS YOURS

Steady profit, week after week.

Spot robots that buy the most liquid coins in small parts and sell them a little higher — every day, from your own wallet.

surefire.capital spot only no leverage no transfers to anyone

SUREFIRE AT A GLANCE

Robots trade on your account. Your capital stays under your control.

A YEAR · EXPECT	PAID UPFRONT	LIVE NOW	CATALOG
50%+	**$0**	**81 robots**	**51**
the return to anchor on	the fee exists only on profit	16 teams on the founding team’s account	strategies, trained and verified

- **Your own account.** Capital is never transferred to us; keys stay with you.
- **One interface.** Positions, trades and fees on web and phone.
- **A portfolio of teams.** Entries on a mapped ladder, profit taken in tranches.
- **Pay for performance.** 30% of profit, 20% with a partner link. No profit, no fee.

A NEW SET OF RULES

A revolution, not another platform.

For a century, putting capital to work meant handing it over first — fees upfront, results later. Here you never part with it: robots trade inside your account, and the only payment is for a real result.

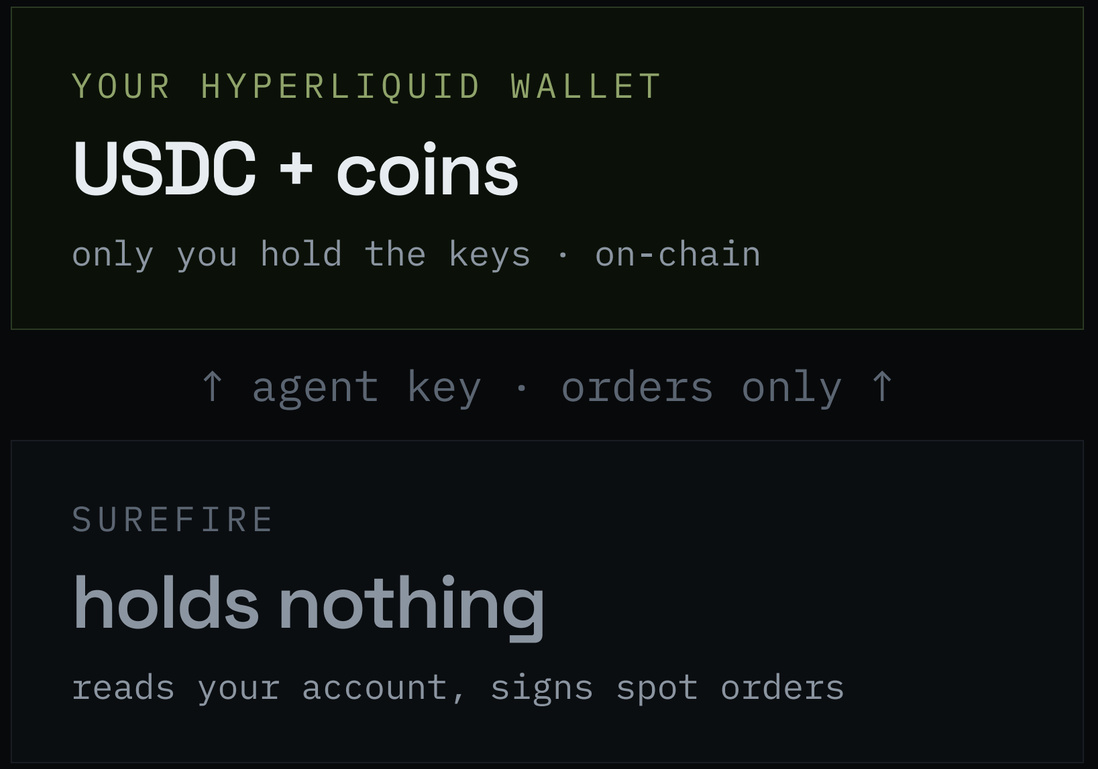
THE FAMILIAR ROUTE	THE COMPROMISE	HOW SUREFIRE DOES IT
Trade yourself	time, discipline, emotions, your own infrastructure	robots execute around the clock; you set the frame
Hand capital to a manager	your money leaves your account	capital stays on your Hyperliquid account
Pay for signals and subscriptions	upfront, regardless of results	a fee only on calculated profit

YOUR MONEY

Your coins never leave your wallet.

Not to us. Not even to an exchange account we control. Surefire trades through a Hyperliquid agent key that can place and cancel spot orders — and nothing else. It works with the wallet you already use: Rabby, MetaMask, Trust Wallet.

- ✓ places and cancels spot orders
- ✗ cannot withdraw or transfer
- ✗ cannot touch perpetuals or leverage
- ✓ revoked in one click, any time



HOW IT TRADES

Robots buy a little lower and sell a little higher. Never all at once.

■ price dips — the robot buys a small part

■ it dips more — another part, average goes down

■ average in profit — it sells, also in parts

WHAT MAKES IT DIFFERENT

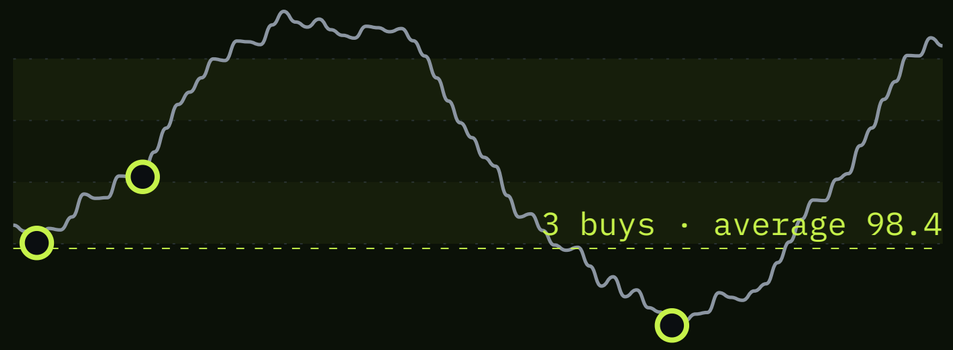
Buys land on the extremes of each range — not on a plain grid.

A PLAIN GRID

fixed lines · buys at each crossing

Buys wherever a line is crossed. Catches the dip early, keeps buying on the way down, averages high.

SUREFIRE · EXTREMES IN EACH RANGE



ranges · waits for the local low

Inside every range the model — trained on years of price history — waits for the local extreme: the low to buy, the high to sell. Fewer buys, lower average, faster exit.

ENTRIES AND EXITS

A dip is a working moment of the plan.

ENTRIES · PLANNED POSITION BUILDING

15–70%

ladder depth below the first buy

First signal, first tranche; next level, next tranche — by plan, no improvisation. Where a leveraged trader meets a flush in a cold sweat, the robot builds its position to full size.

EXITS · PROFIT PLUS A MARKET SIGNAL

2 conditions

target profit and market confirmation

Sold in tranches, profit locked as it comes, no waiting for a perfect top. No stop-losses: the robot holds and keeps working the plan.

BTC · ETH · SOL · HYPE quoted in USDC spot only own funds only

HOW A STRATEGY EARNS ITS PLACE

Train. Verify. Live.

1 · TRAIN

Parameters are searched on one segment of history.

A computational search, not a hunch.

2 · VERIFY

The configuration is run on a segment it has never seen.

The exam decides, not the training score.

3 · LIVE

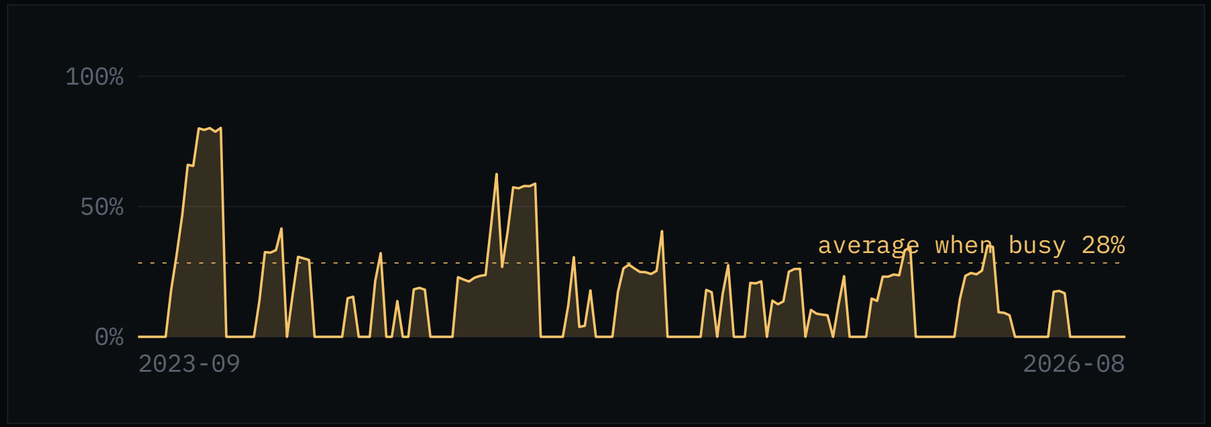
The same rules trade real money.

Published configurations are frozen: the catalog shows exactly what the robot trades.

Continuous team history spans a year and a half, with a clear split between training and verification. Built on years of studying price behaviour and market-maker activity, sharpened by AI analysis.

CAPITAL

Most of your capital stays free.



USUALLY IN COINS

28%

average on days a position is open

STAYS IN USDC

72%

free in your wallet, not at risk

NO IDLE CAPITAL

Teams share one balance. Cash works where it is needed.

Each team keeps its own virtual buy limit on the same real balance. While one waits, another puts the funds to work — no borrowing, no leverage. That is why a portfolio of teams outruns a lone robot.

TEAM	VIRTUAL LIMIT	IN BUYS NOW
Team A	100,000	15,000
Team B	100,000	20,000
Team C	100,000	10,000
Total	300,000	45,000

REAL BALANCE · 100,000 USDC

45,000 at work · 55,000 free

Across teams, 16–34% of capital sits in coins on average — the rest stays free for the next entries.

WHY SPOT

Spot cannot be liquidated. A coin bought can wait.

3 days

a typical dip lasts

median of 62 completed drawdowns · the coins were sold higher every time

0

liquidations, ever

no leverage, no funding, no margin call — nothing can force-close you

13/14

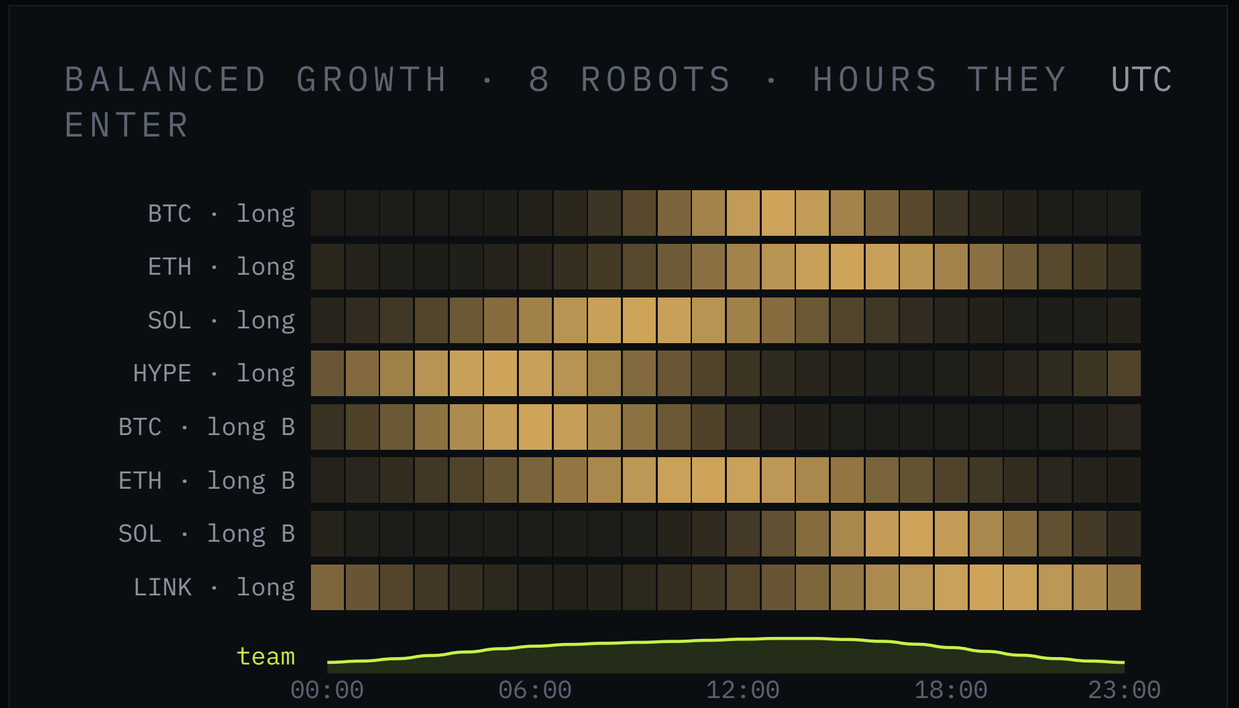
full months in profit

one strategy's replay · a booked sale is never given back

A STRATEGY

Many robots. One wallet. One calm curve.

Each robot watches one top-liquidity coin with its own rules. The model picks robots that fit each other — one buys while another waits — so the team uses capital in turns and its curve is smoother than any single robot's.



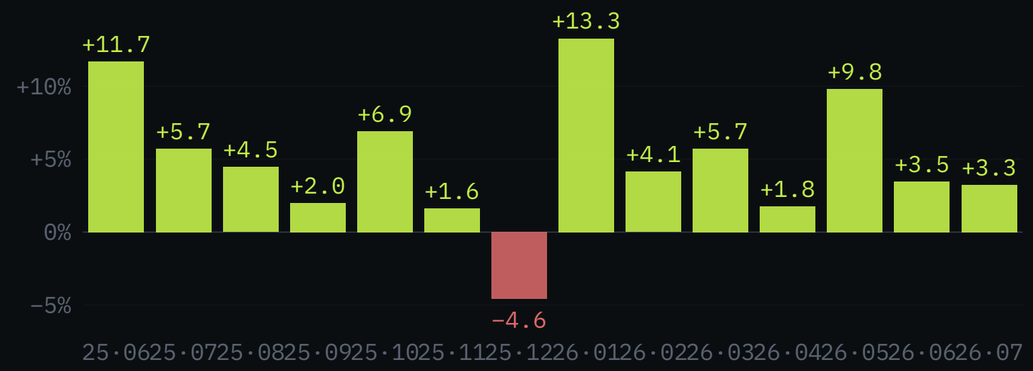
Each row is one robot's usual entry hours. The lime line below is the team: entries spread across the day, so free USDC is used where a signal fires.

ONE STRATEGY · 14 FULL MONTHS

Fourteen months. Thirteen closed in profit.

Three robots on one coin, chosen to fit each other by the model: when one is waiting, another is buying. The team never needed more than a part of its cash at once.

PROFIT BY CALENDAR MONTH · % OF CAPITAL AT MONTH START · UTC



Replay on real prices, 100,000 USDC start, exchange fees included. One of the fourteen months closed down and is drawn in red — the record is shown whole, not trimmed.

+94%

LAST 365 DAYS

+57.6%

BUYS → SALES / MONTH · ONE ROBOT

39 → 16

AVERAGE CYCLE

3 buys

Replay on real prices, compounded — the December dip is on the curve. Exchange fees in, service fee not.

THE CATALOG · LAST TWELVE MONTHS

The leading teams over a year.

TEAM	12 MONTHS	A MONTH	DRAWDOWN
Shared Cash · Capital ×16	+146.2%	12.0%	−13.2%
Shared Cash · High Income	+132.5%	10.9%	−14.2%
Shared Cash · Balanced Income	+108.4%	8.9%	−13.6%
Recovery · Active Trio	+106.6%	8.8%	−15.3%

“A month” is the period average; drawdown is from the team’s own peak. Catalog data, October 2026 — every team’s full history and stats are open in the platform.

SKIN IN THE GAME

The founding team trades the same rules with its own money.

Fifteen years in financial markets — and one frozen exchange withdrawal that lasted six months. That is why Surefire is built around your control over your funds, not around trust in a provider. The first clients trade under exactly the rules the founding team trades itself.

THE HORIZON

Months differ. Twelve months is the measure.

A month spent building positions can show about 1%. A month that closes them outweighs several quiet ones together. So judge Surefire over a year: what is booked on your Hyperliquid account by then is yours to take.

THE CUSHION

Within one to three months the portfolio usually earns a cushion that holds the account above what you put in.

~30%	THE WORST YEAR SEEN what practice has shown at the low end
50%+	THE NUMBER TO EXPECT a year, on capital in your own account
100%+	SELECTED TEAM MIXES have delivered such years

The founding team’s estimates from research and its own trading.

ON YOUR NUMBERS · TWELVE MONTHS

Pick a profile. Read it over a year.

YOUR CAPITAL · USDC	50,000	YOUR CAPITAL · USDC	100,000	YOUR CAPITAL · USDC	200,000
year at 30% · low	+15,000	year at 30% · low	+30,000	year at 30% · low	+60,000
year at 50% · expected	+25,000	year at 50% · expected	+50,000	year at 50% · expected	+100,000

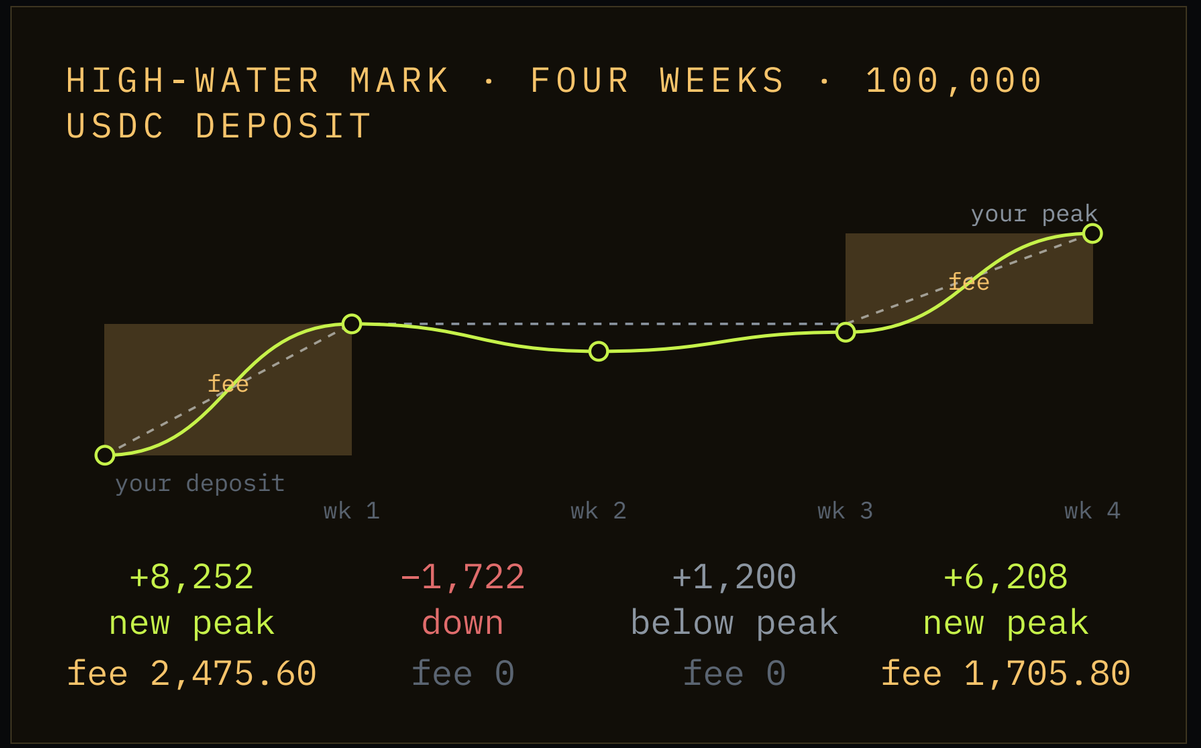
usually in coins	~14,172	usually in coins	~28,344	usually in coins	~56,688

Arithmetic on the 30% and 50% yearly figures. With a partner code the fee is 20%.

THE FEE

The fee exists only after your profit does.

30% of new profit — and only once your Hyperliquid account stands above your deposit and above its own previous peak. Counted weekly, paid from a separate service wallet. Your trading account is never debited. With a partner code: 20%.



THE SERVICE WALLET

The only money Surefire ever touches is the service wallet.

- Opened for you when your account is approved — its own deposit address in the app.
- USDC on Arbitrum One. Keep about 10% of the capital you trade: 10,000 for 100,000.
- Debited once a week, and only for profit already booked above your peak.
- A flat or losing week debits nothing. Welcome credits land here and are spent first.

YOUR PERSONAL WALLET

keys and seed phrase

signs transfers and permissions · only you

YOUR HYPERLIQUID ACCOUNT

capital + all profit

robots place spot orders · nobody can withdraw but you

kept apart · two different operations

SUREFIRE SERVICE WALLET

pays the fee

about 10% of working capital · every debit listed in the app

WHAT IS TAKEN, AND WHEN

Profit is booked on your account first. The fee comes after — from another wallet.

1

The week closes

Monday 00:00 UTC. Robots have bought and sold all week on your Hyperliquid account.

2

One question

Is the account above your deposit and above its previous peak?

3

If yes — a fee

30% of the new part only (20% with a partner code), debited from the service wallet.

4

Profit stays whole

Nothing leaves Hyperliquid. Your capital and all of the profit keep working there.

If no — the week ended flat, down, or still below the old peak: the fee is 0. You never pay for climbing back to a level you already paid for.

Open positions count. Profitable sales with coins still under water do not create a fee by themselves — the whole account result is measured.

WELCOME CREDITS

Your first fees are on us.

Write to support from the app and we add welcome credits to your service wallet. They are spent first, and only on fees for profit you have already made — so you watch real sales land on your own account before a fee is paid from your money.

WHO FUNDS WHAT

your Hyperliquid wallet	yours · you
service wallet · pays the fee	credits first · then you
trading capital sent to Surefire	0

Credits pay fees only — they cannot be withdrawn and are not trading capital.

REFERRAL PROGRAM

Bring a client. Share every fee, 50 / 50.

Your personal link gives the client a 20% rate instead of 30%. The collected fee is split in half between Surefire and you — counted weekly, shown in its own section of the app, for as long as the client trades. No upfront investment.

ON 10,000 USDC OF CLIENT PROFIT	USDC
Referred client’s fee · 20%	2,000
Surefire’s share	1,000
Partner’s share	1,000

The client keeps 8,000 of that profit instead of 7,000 — your link is a discount for them and an income for you.

HOW TO CONNECT

Six steps. One evening.

1 Sign up
surefire.capital · email and Telegram · partner code only here · wait for approval

2 USDC on Arbitrum
buy USDC on your exchange and send it to your own wallet on Arbitrum One

3 Fund Hyperliquid
connect the wallet at app.hyperliquid.xyz and deposit — the account is yours alone

4 A trade-only key
More → API → create an agent wallet: it can trade, it can never withdraw

5 Service wallet
send about 10% of your working capital in USDC to the address shown in Account

6 Follow a strategy
paste the key, pick a team, set the capital, press Follow — first buys within a day

Every step, screen by screen — in the Surefire connection guide that comes with this deck.

WEB AND PHONE

Everything about your account, in one place.

Partner income	your share of every referred fee

Installs from the browser on iPhone and Android. A sound fires only on a confirmed profitable sale; trades also land in Telegram.

FREQUENTLY ASKED

Four questions everyone asks first.

Do I have to send money to Surefire?

No. Robots trade on your own Hyperliquid account under a trading permission. The service wallet is separate and exists only to pay fees.

Is there leverage or liquidation?

No. Spot only, own funds only — margin liquidation is engineered out of the trading entirely.

How fast does profit appear?

Every week — each closed sale is visible on your account. A month in, you can draw confident conclusions; three months in, people fall in love with Surefire.

What if I want to stop?

Three distinct actions: stop new activity, let positions play out by their rules, or request a sale. The consequences of each are spelled out before you confirm.

FREQUENTLY ASKED

And three practical ones.

Which wallet do I need?

Any EVM wallet you are used to — Rabby, MetaMask, Trust Wallet. Hyperliquid connects with them out of the box, in about three minutes.

Are welcome credits trading capital?

No. They cover service fees and are spent only when real profit lands on your account. Trading capital is always yours.

What about taxes?

Surefire is not a tax agent: the platform withholds nothing and files nothing on your behalf — those questions live in your jurisdiction.

AN INVITATION

Looking for an operating partner.

The product is ready and the revenue model works. What is missing is the sales machine — and the founding team hands over its methodology: cold and warm sales, scripts, running a call center.

AREA	FOUNDING TEAM	PARTNER
Product	research, strategies, technical direction	market feedback and priorities
Sales	expertise, demos, sales methodology, call center	sales floor, marketing, referral network
Business	product and economic terms	funding, operations plan, lawyers

FAST START
$50,000 a month · $300,000 in six

FULL LAUNCH
$100,000 a month · $600,000 in six

STRUCTURE
founding team keeps 50%+ · Cyprus, Switzerland, Dubai

THE NEXT STEP

Three ways in.

FOR A CLIENT

Open surefire.capital, browse the catalog, launch your first team.

The best introduction is your own account at work — with welcome credits, your first fees are already covered.

FOR A REFERRAL PARTNER

Get your personal link and start with your own circle.

The 50 / 50 model turns every referral into recurring income.

FOR AN OPERATING PARTNER

Let’s discuss structure, budget and the commercial machine.

The product is ready to grow; what is left is the team that builds the growth. Write via surefire.capital.

Start this week.
Judge it in twelve months.

Your wallet, your coins, your keys. A fee that exists only when your account is already above your deposit.
